

Chinese-Japanese comparison research in invitation expressions

Huang Mingshu

This author conducted the Chinese-Japanese comparison research on the theme of "Invitation expressions" and is continuing the research in the doctoral course.

The author has the support of the graduate school education support program "Promoting skills for the transmission of global information on Japanese culture research" and the "foreign academic discussions" in 2010 fiscal year, and participated in "The tenth China Japanese Education Association/ The sixth china-japan-korea culture and education research international forums" held in China from 24th to 27th September, 2010. Study results were announced. From the presentation, the following conclusions can be drawn.

Firstly it was clear that JNS used the overall semantic formula with more frequency than CNS.

Next, in the different types of the semantic formula, a difference could be seen in 'Joint act demand', 'Inducement utterance' and 'Noteworthy display'.
