

The 3rd special lecture "Education for Sustainable Development in Japan"

6:00PM-7:30PM, JULY 21, 2022(JST)

Currently, the international community is developing an international implementation framework for ESD from 2020 to 2030 called "Education for Sustainable Development: Towards achieving the SDGs (ESD for 2030)". Meanwhile, in Japan, the number of UNESCO Associated Schools increased rapidly during the UN Decade of ESD (2005-2014), and the current curriculum guidelines include the development of "creators of a sustainable society" in kindergartens, elementary, junior high and high schools, which is highly expected as a concrete measure for achieving the Sustainable Development Goals (SDGs). This Special Lecture will focus on the educational policy and practice of ESD in Japan and clarify the characteristics of Japanese education and its future challenges.

Dr. Miki SUGIMURA

Professor, Comparative and International Education, Faculty of Human Sciences at Sophia University in Japan.

M.Ed. and Ph.D. (University of Tokyo). She is contributing to many roles in academia including being a member of the Japanese National Commission for UNESCO among many others.
